

## Quick Browser Update

**BLUE**

**PREDATOR**

**RG**

As user, you can remember many times when you have been looking for a particular sound while you have been scrolling through the many presets inside BLUE, Predator or RG. Sometimes you keep on searching and then suddenly you are sure, you heard the right sound a few banks before. Most of the time it is a problem to find this preset back again!

Therefore we added "Quick Browser" where you can browse through all the presets and banks, but also a "Recently Browsed" function so that you can track down easily the presets you tried out previously. On top of that we added "Favourites" where you can collect you favourite presets.

- **Quick Browser**

Use the right mouse button (or control-click on Mac) inside the Preset display menu to open the 'Quick Browser'. With BLUE use the right mouse button (or control-click on Mac) at the preset button itself (menu tab button)

This "Quick Browser" shows all the available banks and its presets. If you then click on a preset, that bank and preset will be loaded in.

- **Recently Browsed**

This shows a list of all the recently used presets. Clicking on an entry loads in that preset again. Clicking on "Clear Recent" removes all entries.

- **Favorites**

This shows a list of presets selected as being Favorites presets.

Clicking on an entry loads in that preset. You can select a preset to be a Favorite by clicking on "Add Current to Favorites" .

"Remove Current from Favorites" removes the current preset from the Favorite list , and "Clear Favorites" removes all entries.

The Favorite list is stored on the computer's hard-disc , so the list will be remembered the next time you use the plugin.

Note:

As well as these, if you change a preset and then load in another bank, you will be given the option to overwrite the old bank with the altered version.

If you do, a backup of the original bank will be saved in the Backups folder.

Also copies of all the original banks can be found in the Original Banks folder.

At the back panel of the Plugin (click at the Rob Papen logo) you can set this bank warning to "off". If you do change banks and the banks has been altered, the changes are not stored.
